| <b>ENGLISH &amp; LANGUAGE ARTS</b>        | Our program features a content-rich literacy curriculum rooted in the Science of Reading and Writing. By explicitly developing phonemic awareness, phonics, vocabulary, fluency, and deep comprehension, we ensure students master the mechanics of language while building critical thinking skills. Students are immersed in a text-rich environment where they explore diverse literature, including fiction, nonfiction, poetry, and in-depth novel studies. Mirroring this literary growth, students learn to express complex ideas with precision by writing across multiple forms, including narrative, expository, and informational texts. This integrated approach prepares students to be confident, articulate readers and writers. |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>MATH &amp; COMPUTER SCIENCE</b>        | The program emphasizes concept mastery through a framework based on metacognition, processes, concepts, skills, and problem solving. Math is experienced through a developmental continuum of hands-on instruction and practice, problem solving, skill consolidation, and use of technology.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>SCIENCE &amp; ENGINEERING</b>          | The developmentally appropriate and challenging curriculum includes explorations in life science (plants and animals), physical science (chemistry, magnets, physics), and earth science (geology, space, weather, archaeology).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>HISTORY &amp; SOCIAL STUDIES</b>       | The curriculum focuses on developing conceptual understanding and analytical skills in areas such as culture, history, geography, citizenship, government, economics, and global connections, with an emphasis on organizing and presenting research. It builds year after year in ever-widening circles, as students learn to understand the world around them - from family, to school, to community, city, state, and country - while also developing a sense of self and an appreciation for others.                                                                                                                                                                                                                                        |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>WORLD LANGUAGES</b>                    | Spanish Students gain competence in listening, speaking, reading, and writing in Spanish. Hispanic cultures are also introduced with literature, music, geography, holidays, dances, and fiestas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>ART</b>                                | <p><b>VISUAL ARTS:</b> With the models of world art and the great masterworks, students' art creations develop in-depth understanding of the four elements of art: line, shape, color, and texture. Each year, students develop their skills in ceramic art, sculpture, drawing, painting, and other forms of image making.</p> <p><b>MUSIC:</b> Through total involvement in the creative and performing process, children study how sound can be organized, read, and written, as well as the cultural and historical significance of musical literature. Musical experiences occur through games, stories, songs, dances, and improvisation.</p>                                                                                             |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>PHYSICAL EDUCATION</b>                 | Daily classes emphasize the development of strength, balance, endurance, agility, locomotion skills, and eye-hand coordination while enhancing the students' listening, thinking, and sequencing skills and fostering sportsmanship.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>LIBRARY</b>                            | The library has a diverse collection of books and resources to foster lifelong reading and learning in all children. In the library, students also learn how to locate, use, and cite informational research sources, and then communicate their constructed knowledge through different media.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
| <b>MAKERSPACE &amp; TECHNOLOGY</b>        | The makerspace and technology work enriches the curriculum by igniting creativity, collaboration, and problem-solving skills in our elementary children. Equipped with tools such as 3D printers and pens, robotic kits to encourage on- and off-screen coding, and equipment for media creation, children explore, experiment, and develop critical skills to become positive citizens to serve within the community.                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                              |                                                                                                                                                                                     |                                                                                                                                               |
